

ABSTRACT OF THE DISCLOSURE

A system for a computing device of one embodiment of the invention is disclosed that includes an image-capturing mechanism and a controller. The image-capturing mechanism is capable of capturing images. Each image
5 includes at least one corner of a display communicatively coupled to the computing device. The controller is to determine at least one of positioning and relative movement for a graphical-user interface element displayed on the display, based on the images captured by the image-capturing mechanism.
